Mood & Motivation Study

The University of Pittsburgh Medical Center is conducting a research study of healthy 13-19 year olds to better understand how mood changes and develops.

Your adolescent may be eligible if:

- you (parent) have a history of depression, bipolar disorder, or schizophrenia
- your adolescent has no history of severe depression, bipolar disorder, autism, schizophrenia (mild depression is okay)

Participation includes:
- Interview & Questionnaire
- Computer tasks
- Brain imaging scan

Participants will be compensated.

Text or call 412-589-9013 for more information.
